

CareLink is a cloud based software product that was developed as a practice management tool tailored for your mobile primary care practice.

CareLink is not an EMR, it is specifically a practice management and collaboration tool which allows you to interact electronically with patient's care givers, assisted living homes, group homes, doctors' offices, and others who are managing the care of a large group of patients within your practice.

CareLink also has powerful scheduling and administrative tools to improve your office workflow.

The ideal Solution for Mobile Doctors, Clinics, Private Nursing, or any Company with Mobile Medical Service or Practice
