CareLink Web Hook Reference v 1.5

The CareLink Webhook API makes use of a simple post command to pass parameters using field value pairs. Calls to the CareLink Patient and Schedule Webhook API should be made to:

Patient Rest Webhook End Point

https://yourdomain.mymobilepracticemanager.com/carelink/api/patient.php

Schedule Rest Webhook End Point

https://yourdomain.mymobilepracticemanager.com/carelink/api/schedule.php

For all calls you will need to pass in your API key as a post variable. If enabled your API Key can be found under Configuration Settings->View Site Setting.

Patient Update Parameters

The API object is a XML response returned by the CareLink Webhook API and represents a patient action to take Below are the allowed sending parameters.

Field Name	Description
apikey	The API Key of the receiving site
action	Action to take. Allowed ('update')
status	Required: 1 = Active, 0 = Inactive
patientemrid	Required: EMRID of patient within CareLink Account

Usage and Example

The following curl example using field value pairs and the resulting response.

```
$curl = curl_init();
curl_setopt_array($curl, array(
  CURLOPT_URL => 'https://test.azhousecalls.com/carelink/api/patient.php',
  CURLOPT_RETURNTRANSFER => true,
  CURLOPT_ENCODING => '',
  CURLOPT_MAXREDIRS => 10,
  CURLOPT_TIMEOUT => 0,
  CURLOPT_FOLLOWLOCATION => true,
  CURLOPT_HTTP_VERSION => CURL_HTTP_VERSION_1_1,
  CURLOPT_CUSTOMREQUEST => 'POST',
  CURLOPT_POSTFIELDS => array('apikey' => 'nJXSVCU7lsIyGud4eqhJ','action' => 'update','status' => '1','patientemrid' => '110'),
));
$response = curl_exec($curl);
curl_close($curl);
echo $response;
```

Response

The response will be XML encoded. Example Failure and Success responses are below. Success response will give the CareLink patient unique ID.

Success Response

```xml
<?xml version="1.0" encoding="utf-8"?>
<response>
    <status>Success</status>
    <message>Patient Updated</message>
    <patientemrid>110</patientemrid>
</response>
```

Failure Response

```xml
<?xml version="1.0" encoding="utf-8"?>
<response>
    <status>Failure</status>
    <message>An Error has Occurred</message>
    <errors>
        <error>Invalid action</error>
    </errors>
</response>
```

Schedule Update Parameters

The API object is a XML response returned by the CareLink Webhook API and represents a schedule action to take Below are the allowed sending parameters.

Field Name	Description
apikey	The API Key of the receiving site
action	Action to take. Allowed ('update')
status	Required: 1 = Confirmed, 0 = Not Confirmed
scheduleid	Required: Schedule of appointment within CareLink Account

Testing

Please use the following links for testing:

Endpoint = https://schedule.mymobilepracticemanager.com/carelink/api/patient.php

apikey = nJXSVCU7lsIyGud4eqhJ

Please use the following logon to view your results
